THE ONE-LINE PROMPT, PLUS A FULLER ONE

The prompt that turns *a sketch* into a website

I drew a page on my notepad, took one photo, and Fable 5.2 in Claude Code built it as a real website.

17 MINUTES · $7.47 AT API PRICES · ONE LINE

BEFORE YOU START

What you *need*

- **Claude Code**, version 2.1.321 or later. Run `claude update`, then check with `claude --version` (claude.com/claude-code)
- **Fable 5.2**: type `/model fable` inside Claude Code. `/model opus` switches back to Opus 5.5, which stays the default
- **A paid Claude plan**: Fable is on Pro, Max, Ultra, Team and Enterprise, not Free (the costs are in "What it costs")
- **A pen, paper and your phone's camera**
- **An empty folder** on your computer for the new site

WHAT I DID

I drew a website on my notepad, took one photo and gave it to Fable 5.2 with one line of text. I started it with **/awwwards**, my own design skill. No follow-ups.

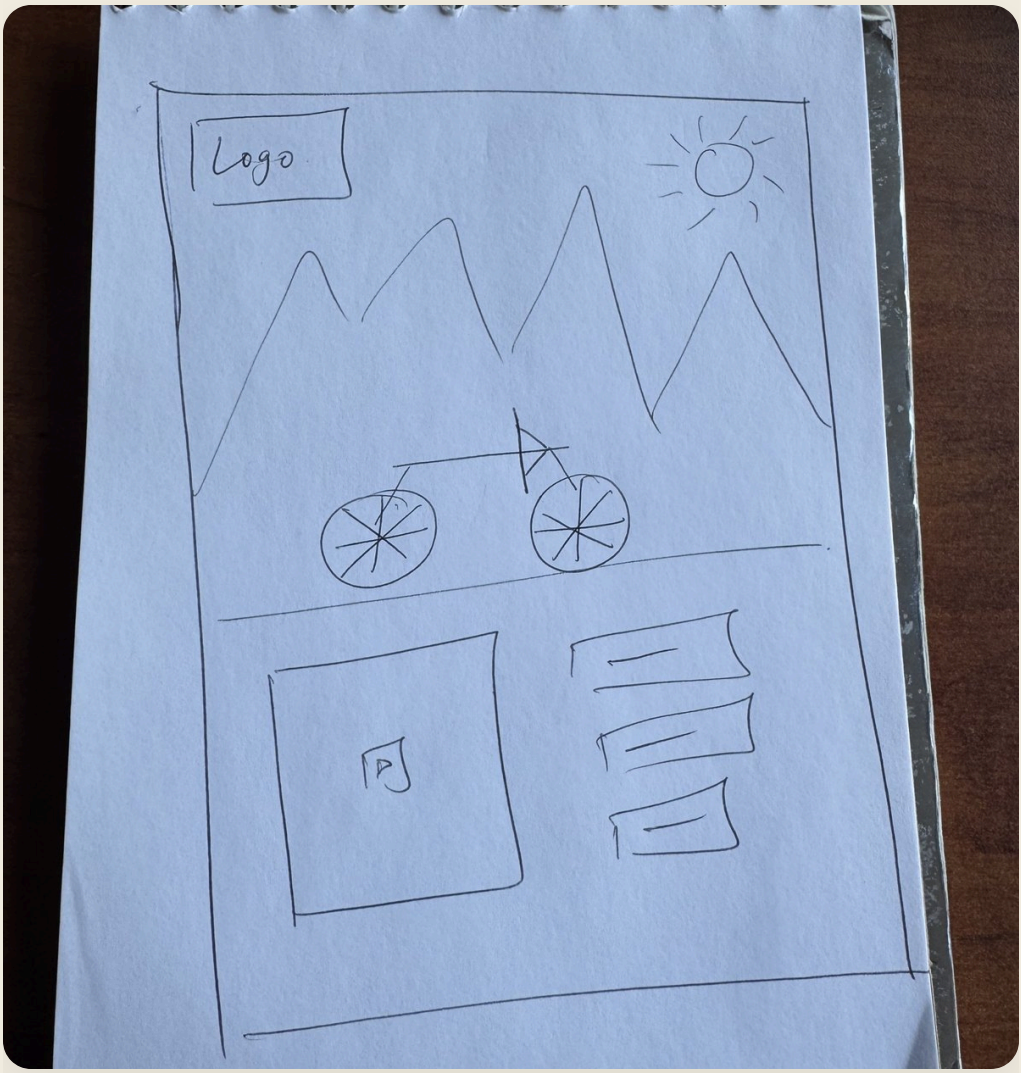

THE RUN, IN NUMBERS

MODEL	Fable 5.2 in Claude Code, with my /awwwards skill
TIME	17.2 minutes
COST	$7.47 at API list prices: Claude Code's own estimate, not my plan's bill
INPUT	one photo of my sketch + one line
RESULT	"Lacet": a home page, three climb pages and a 404, with its own name and copy

STEP 1

Draw a sketch *Claude can read*

- **One page = one screen.** Draw a frame for the edge of the page first.
- **A box for each part**: the logo, a picture, a row of cards. Three boxes means three things.
- **Label what isn't obvious** with one word, like I wrote "Logo". Short notes work too: "button here", "make this blue".
- **Draw the things that matter.** My sun, mountains and bike all became part of the design.
- **Take the photo from above**, in good light, with the whole page in the frame.

My sketch: a logo box, a sun, mountains, a bike on a road, a picture and three boxes. That's all.

STEP 2

The *prompt*

1 Open Claude Code in an empty folder

IN YOUR TERMINAL

```
cd my-sketch-site
claude
```

Then type `/model fable` and press Enter.

2 Send the photo with one line

This is exactly what I typed. Drag your photo into Claude Code where it says [your photo]: it pastes the file's path for you.

THE PROMPT I USED

```
/awwwards build this: [your photo] (plain HTML, CSS and JS in
this folder, no build step)
```

"Plain HTML, CSS and JS, no build step" means you can open the result in your browser straight away.

ABOUT /AWWWARDS

/awwwards is my own design skill for Claude Code, so you won't have it. Without it, use the fuller prompt in the next section, "Without my design skill".

NO SKILL NEEDED

Without my design skill

My suggestion for a plain prompt. I haven't tested this one: it spells out what my skill did for me.

A FULLER PROMPT (NOT TESTED)

```
[drag the photo of your sketch in here]

Build this as a website. Every box on my sketch is a section, in
the same order. Follow my handwritten notes in the margins too.

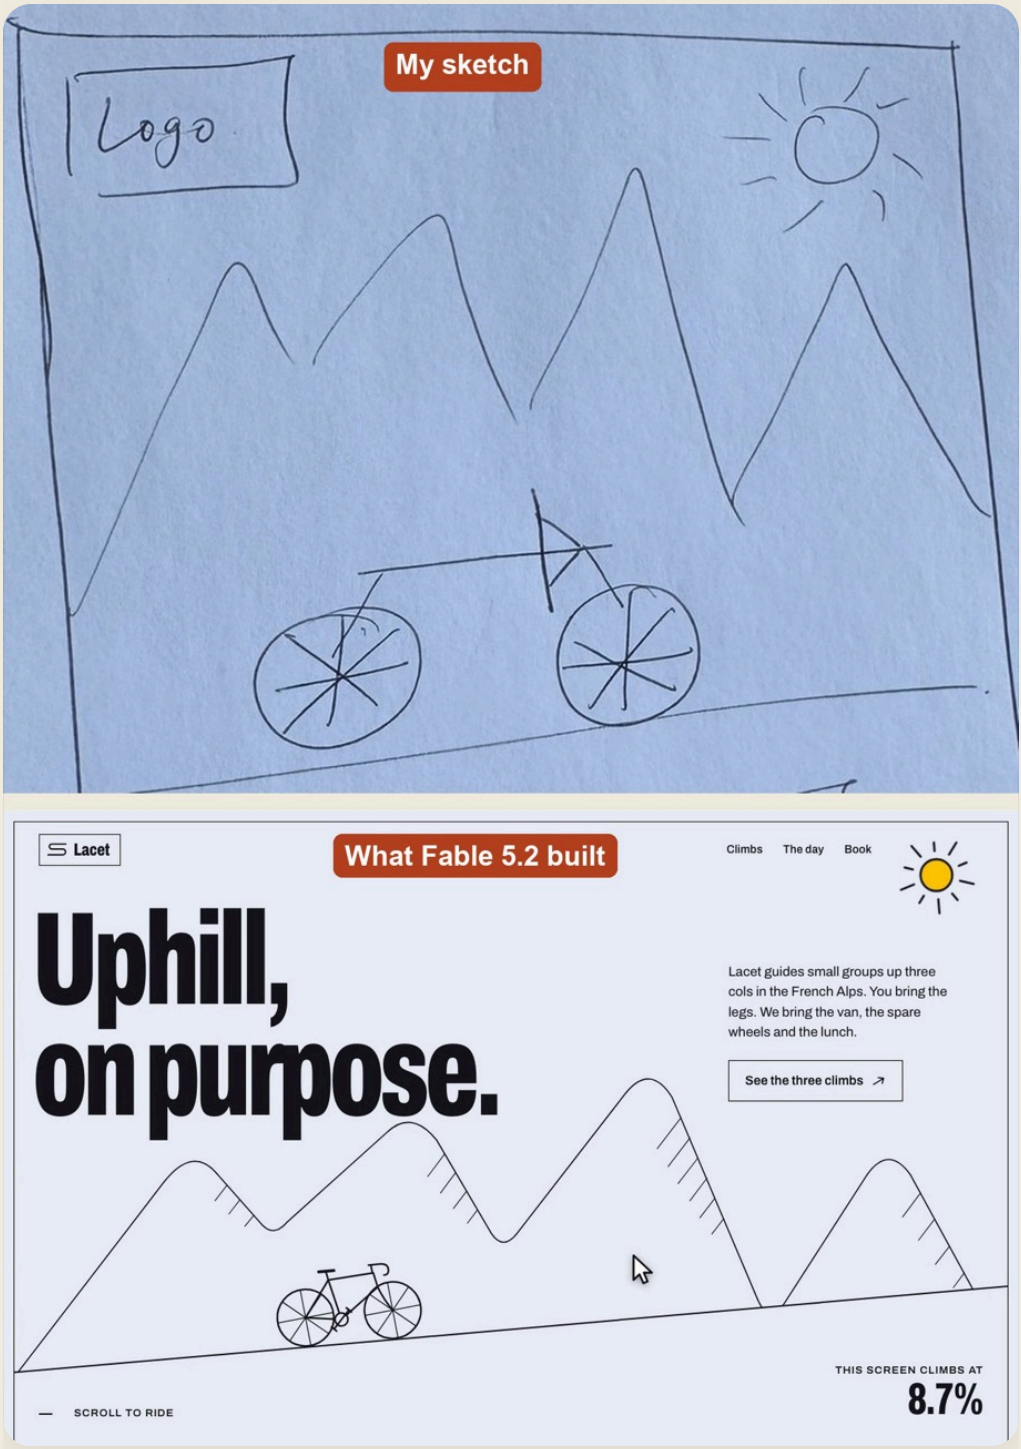

Make it look finished: real copy instead of placeholder text, a
clear layout, and it must work on a phone. Use plain HTML, CSS
and JavaScript in this folder, with no build step. Open it in my
browser when it's done.
```

Make it yours

- **Say what it's for.** Mine had no name and no text, so it invented a business. If you want your own name and words, add them: "It's for my bakery, [name], in [city]."
- **Ask for one change at a time** after the first build: "make the bike bigger", "add a contact form".
- **Open it on your phone** before you call it done.

WHAT IT BUILT

Every part of *my drawing*

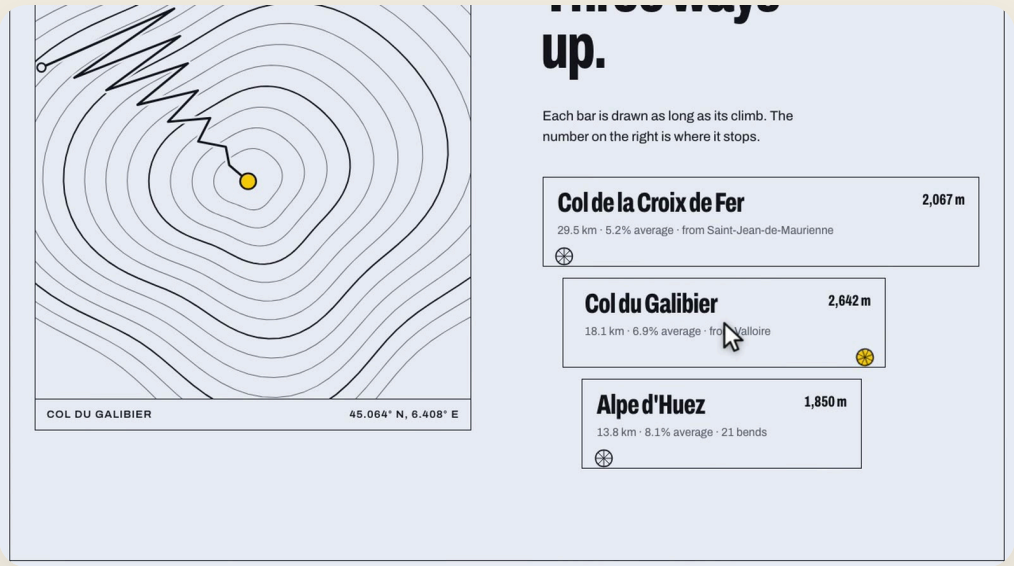

Top: my sketch. Bottom: the home page Fable 5.2 built from it, from one line.

WHAT IT BUILT

Box by box

SKETCH → WEBSITE

LOGO BOX	a boxed logo, top left
SUN	a sun, top right
MOUNTAINS	four line-drawn peaks
BIKE + ROAD	the bike rides up the road as you scroll
PICTURE + 3 BOXES	a drawn map + three climb cards, one for each box

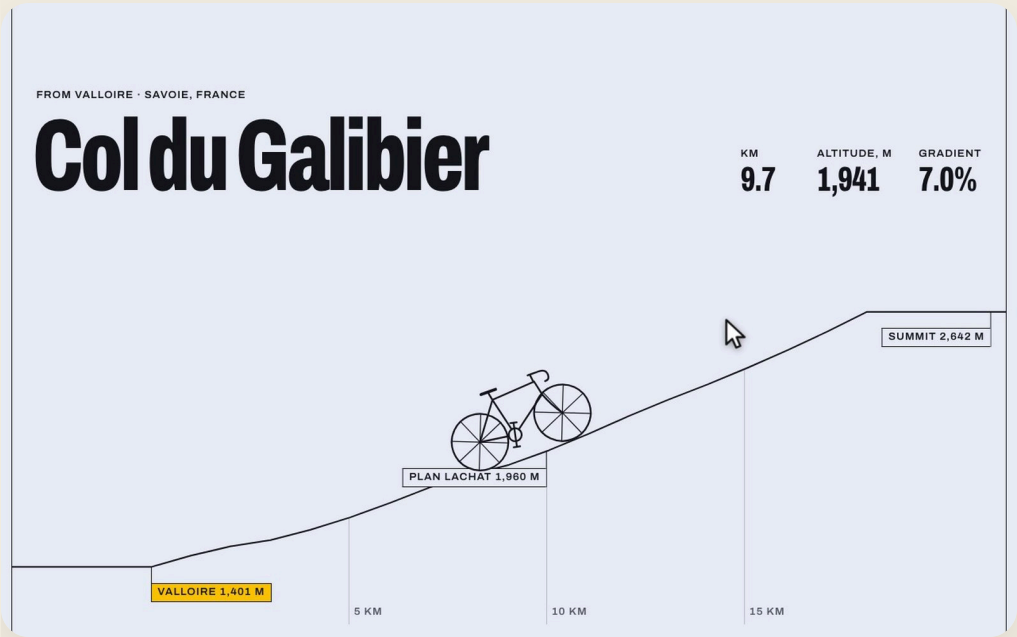

The picture and three boxes from my sketch: a map and three climbs.

WHAT IT ADDED

It gave it *a name*

My sketch had no name and no text. It called the site **Lacet** ("Guided cycling climbs in the French Alps") and wrote all the copy. It added a day timetable, a footer, a 404 page, and **three climb pages** where the bike rides the climb with live km, altitude and gradient. There are no photos: the maps are drawn in code.

One of the three climb pages. The bike moves along the climb.

CHECK IT YOURSELF

In my run, its own browser checks were blocked, so the finished site was checked afterwards in a real browser. Open yours and scroll every page before you share it, on your phone too.

BEFORE YOU RUN IT

What it *costs*

$7.47 my run, at API list prices	**17 min** start to finish
2× Opus 5.5's price per token	**1** line of text, plus the photo

API PRICE	Fable 5.2: $8 in / $40 out per million tokens. Opus 5.5: $4 / $20
PRO	included this launch week, up to 50% of your weekly limit, until **16 Nov 2026, 11:59 pm PT**. After that, Fable runs on usage credits, which you pay for
MAX, ULTRA	included, up to 50% of your weekly limits
SEE YOUR COST	`/usage` shows a session's tokens and its cost at API prices

Fable costs 2× Opus, so try the same prompt on Opus first (`/model opus`). Prices checked 10 Nov 2026.
