ALL 6 LINKS + THE REAL LIMITS

6 free AI tools to *stop paying* for

The links, the real free limits, what each one runs on, and how to start — checked on 18 Oct 2026.

START HERE

Which one *first?*

PICK THE ONE YOU PAY FOR TODAY

ELEVENLABS	→ **Chatterbox** — voice cloning, even in Hindi
TOPAZ	→ **Upscayl** — 4× sharper photos
REMOVE.BG	→ **Remove Background** — already on your laptop
SUNO	→ **ACE-Step 1.5** — full songs with vocals
MIDJOURNEY	→ **Z-Image-Turbo** — photoreal images
DESCRIPT	→ **Buzz** — offline captions

WHAT YOU KEEP

$71/mo → *$0*

About $857 a year, at the prices on each tool's own page on 18 Oct 2026.

FASTEST WIN (10 SECONDS)

Right-click any photo → **Remove Background**. It's already on your Mac (Preview / Finder) or Windows 11 (Paint). No upload, no account, no watermark.

VOICE CLONING

Chatterbox

instead of ~~ElevenLabs $6/mo~~ → **$0**

Clones **your own** voice from a short clip and reads any script in it — with a dedicated Hindi model.

FREE LIMIT	Unlimited on your laptop (every file carries an inaudible watermark). In the browser: about 2 GPU-minutes a day logged out, 5 with a free Hugging Face account.
RUNS ON	Any laptop — the small *Nano* model runs on a normal CPU.
PAID STILL WINS	A ready-made voice library and an API.
CLIENT WORK	MIT — fine for client work. Clone only your own voice.

START IN 3 STEPS

1. Open the Hindi demo in your browser and upload 10–20 seconds of your voice.
2. Type your script (Hindi or English) and generate.
3. Like it? Install it from GitHub to run it free and unlimited.

PHOTO UPSCALING

Upscayl

instead of ~~Topaz Gigapixel $149/yr~~ → **$0**

Makes blurry or low-res photos about 4× sharper, on your own computer.

FREE LIMIT	Unlimited, offline, no watermark.
RUNS ON	A computer with a Vulkan graphics card — most built-in laptop GPUs can't run it.
PAID STILL WINS	Video. Upscayl does photos only.
CLIENT WORK	Open source (AGPL) — your images are yours.

START IN 3 STEPS

1. Download it from upscayl.org or GitHub — the Mac App Store copy costs money, this one doesn't.
2. Drop in a photo and pick a model (the default for photos, *Digital Art* for graphics).
3. Hit Upscayl and save.

MAC + WIN

BACKGROUND REMOVAL

Remove Background

instead of ~~remove.bg $9/mo~~ → **$0**

Cuts the subject out of a photo in one click and saves a transparent PNG — no upload, no account. Already built into your laptop.

My own test: a frame of my reel, cut out with Apple's engine — the one behind Remove Background.

FREE LIMIT	Unlimited, full resolution, no watermark.
RUNS ON	macOS (Preview or Finder) and Windows 11 (Paint).
PAID STILL WINS	Hundreds of photos at once, through its API.
CLIENT WORK	Built into your system — use it for anything.

START IN 3 STEPS

1. **Mac:** open the photo in Preview → Tools → Remove Background — or right-click it in Finder → Quick Actions → Remove Background.
2. **Windows 11:** open it in Paint → Remove background.
3. Save as PNG to keep the transparent background.

AI MUSIC

ACE-Step 1.5

instead of ~~Suno Pro ~$10/mo~~ → **$0**

Full songs with vocals and lyrics from one prompt — 10 seconds to 10 minutes, in 50+ languages.

FREE LIMIT	Unlimited on your machine. In the browser: a daily GPU quota.
RUNS ON	A graphics card with 4 GB of memory, or an Apple Silicon Mac.
PAID STILL WINS	One click in the browser, nothing to install.
CLIENT WORK	MIT — fine for client work.

START IN 3 STEPS

1. Try a prompt in the browser playground first.
2. Install it from GitHub (packages for Windows with NVIDIA and for Apple Silicon Macs).
3. Describe the style, paste your lyrics, generate.

Good to know: Only download it from that GitHub page — fake "ACE-Step" sites exist.

IMAGE GENERATION

Z-Image-Turbo

instead of ~~Midjourney $10/mo~~ → **$0**

Photoreal images from a prompt in 8 steps — and it writes readable English text.

FREE LIMIT	Unlimited on your machine. In the browser: about 5 GPU-minutes a day with a free Hugging Face account.
RUNS ON	A 16 GB graphics card — or any Apple Silicon Mac with the free Draw Things app.
PAID STILL WINS	Its signature art styles.
CLIENT WORK	Apache-2.0 — fine for client work.

START IN 3 STEPS

1. Try it in the browser first.
2. On a Mac: install Draw Things and pick Z-Image-Turbo inside it.
3. On Windows with an NVIDIA card: run it from its Hugging Face page.

CAPTIONS

Buzz

instead of ~~Descript $24/mo~~ → **$0**

Offline Whisper transcription → caption files (SRT, VTT, TXT). Hindi included.

FREE LIMIT	Unlimited, offline, no account.
RUNS ON	Any Mac, Windows or Linux laptop.
PAID STILL WINS	Editing video by editing text, and animated word-pop captions.
CLIENT WORK	MIT — fine for client work.

START IN 3 STEPS

1. Download Buzz from GitHub.
2. Drop in your video, pick the language, transcribe.
3. Export SRT and import it into your editor (CapCut, Premiere, DaVinci).

Good to know: It makes the caption file, not animated captions — style them in your editor.
