ONE PROMPT · CLAUDE FABLE 5.2

The prompt for *your own* browser operating system

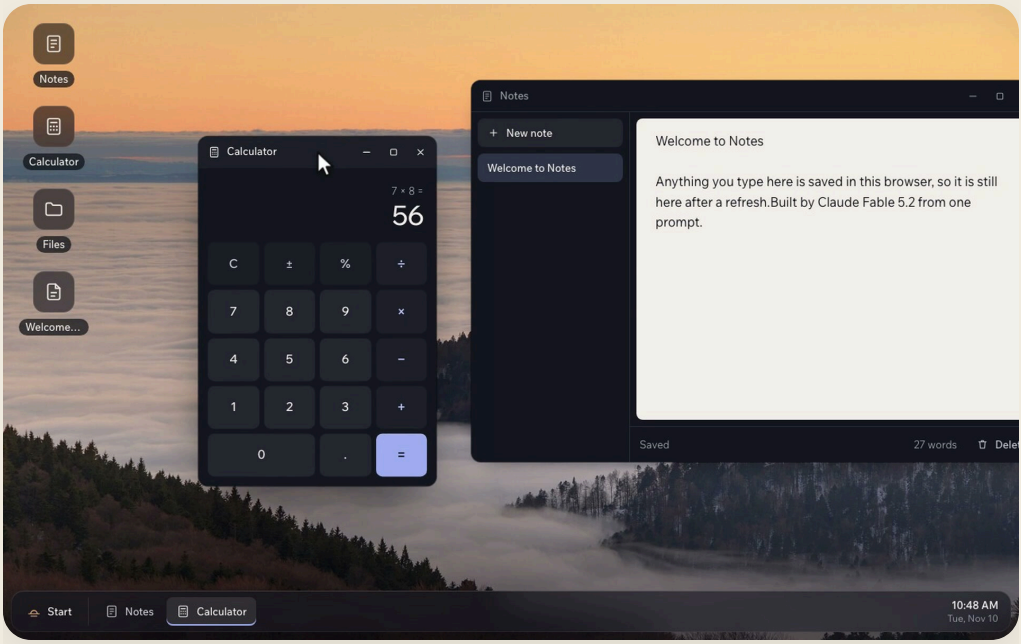

A desktop with windows, a taskbar, Notes, a Calculator and Files — built in Claude Code from one prompt.

7.4 MIN · $3.95 AT API PRICES · ONE PROMPT

WHAT IT BUILT

A *desktop* in a browser tab

My run: Notes and the Calculator (7 × 8 = 56) open on the desktop. Wallpaper: Vallee-brouillard.jpg by Thomas Bresson, CC BY 3.0, via Wikimedia Commons.

DESKTOP	a wallpaper and icons for each app
TASKBAR	a **Start** menu that opens the apps, and a clock
WINDOWS	you can drag them around
NOTES	keeps what you type after a refresh
CALCULATOR	works: 7 × 8 = 56
FILES	a few sample files you can open

THE PROMPT

Copy it as it is

COPY THIS PROMPT

```
Build a desktop operating system that runs in the browser, as a website. I want:
- a desktop with a wallpaper and a few icons
- windows I can drag, resize, minimise and close
- a dock or taskbar with a clock
- three apps that really work: Notes (keeps what I type after a refresh), a Calculator, and a Files app with a few sample files I can open
- a start menu that opens the apps

Use plain HTML, CSS and JavaScript in this folder, with no build step and no libraries.
When it's done, open index.html in my browser.
```

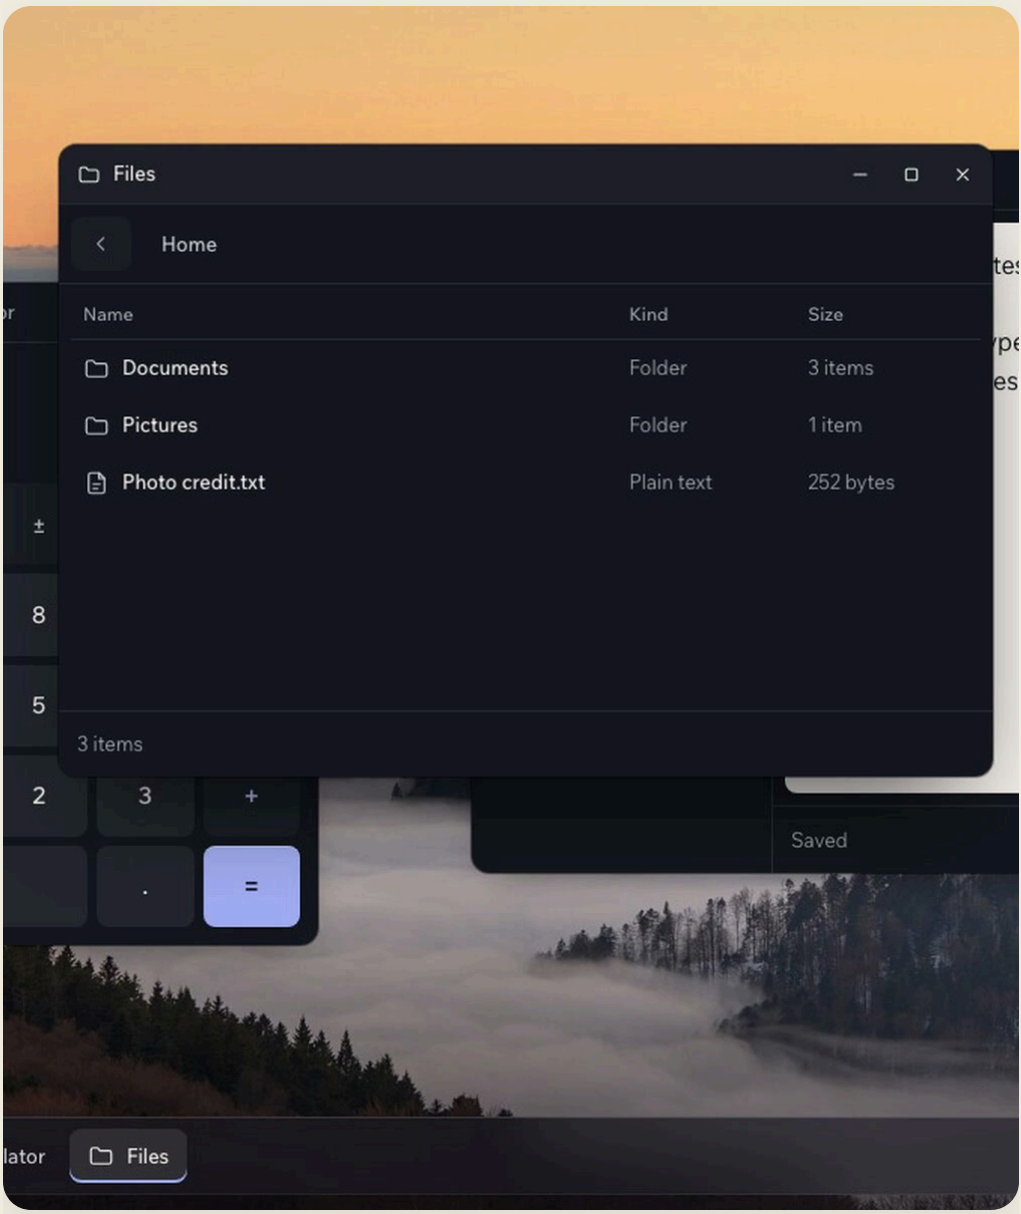

MY RUN

MODEL	Claude Fable 5.2 in Claude Code
TIME	**7.4 minutes**, one prompt
COST	**$3.95** — Claude Code's own estimate at API list prices, not a plan bill

HOW TO RUN IT

Four steps in Claude Code

- **Update Claude Code.** Fable 5.2 needs version **2.1.321 or later** (`claude --version`).
- **Open it in an empty folder** — the app is built there.
- **Type** `/model fable` to switch. `/model opus` switches back; Opus 5.5 stays the default.
- **Paste the prompt** and let it work. When it's done it opens `index.html` in your browser.

The Files app from my run, over the Calculator.

FOR SCALE

Theirs vs *mine*

WHAT ANTHROPIC SAYS

One Anthropic engineer gave Fable 5.2 the task of designing a prototype operating system. "Starting from an empty folder, the model coordinated over 1,000 subagents, working around the clock for eight days." The result: "a working operating system that boots on a laptop". (launch post)

THE DIFFERENCE

1,000+ subagents in Anthropic's run	8 days around the clock
1 prompt in mine	7.4 min start to finish

BE HONEST ABOUT IT

Mine is **not a real operating system**. It's a website that looks and works like a desktop — a fun weekend project, and a good test of what one prompt can do.

BEFORE YOU TRY IT

What Fable *costs*

PRICE	Fable 5.2: **$8 / $40** per million tokens in / out. Opus 5.5: **$4 / $20**. Fable is exactly **2×** per token.
FREE PLAN	No Fable.
PRO	Normally Fable runs on **usage credits** (paid), not your plan's limits. Launch week it's included, up to 50% of your weekly limit, until **16 Nov 2026, 11:59 pm PT**.
MAX, ULTRA	Included, up to 50% of your weekly limits.
THE MENU	Where Fable bills to usage credits, `/model` shows "Requires usage credits" and asks once. That's real money.

Anthropic's numbers, checked 10 Nov 2026. Their own advice: start with Opus 5.5, "our strongest daily driver"; Fable is "best for the most ambitious, open-ended technical work".
